

## 2.2 Sectioning Commands

The commands for inserting sections are fairly intuitive. Of course, certain commands are appropriate to different document classes. For example, a book has chapters but an article doesn't.

Command	Level
<code>\part{}</code>	-1
<code>\chapter{}</code>	0
<code>\section{}</code>	1
<code>\subsection{}</code>	2
<code>\subsubsection{}</code>	3
<code>\paragraph{}</code>	4
<code>\subparagraph{}</code>	5

Numbering of the sections is performed automatically by L<sup>A</sup>T<sub>E</sub>X, so don't bother adding them explicitly, just insert the heading you want between the curly braces. If you don't want sections numbered, then add an asterisk (\*) after the section command, but before the first curly brace, e.g., `section*{A Title Without Numbers}`.
