

2.1.1 Article Information

- `\title{}` — The title of the article.
- `\date` — The date. Use:
 - `\date{\today}` — to get the date that the document is typeset.
 - `\date{}` — for no date.

2.1.2 Author Information

The basic article class only provides the one command:

- `\author{}` — The author of the document.

It is common to not only include the author name, but to insert new lines (`\`) after and add things such as address and email details. For a slightly more logical approach, use the AMS article class (*amsart*) and you have the following extra commands:

- `address` — The author’s address. Use the new line command (`\`) for line breaks.
- `thanks` — Where you put any acknowledgments.
- `email` — The author’s email address.
- `urladdr` — The URL for the author’s web page.

2.2 Sectioning Commands

The commands for inserting sections are fairly intuitive. Of course, certain commands are appropriate to different document classes. For example, a book has chapters but a article doesn’t.

Command	Level
<code>\part{}</code>	-1
<code>\chapter{}</code>	0
<code>\section{}</code>	1
<code>\subsection{}</code>	2
<code>\subsubsection{}</code>	3
<code>\paragraph{}</code>	4
<code>\subparagraph{}</code>	5

Numbering of the sections is performed automatically by \LaTeX , so don’t bother adding them explicitly, just insert the heading you want between the curly braces. If you don’t want sections number, then add an asterisk (*) after the section command, but before the first curly brace, e.g., `section*{A Title Without Numbers}`.
